

GREENPOXY® BIO-BASED SYSTEMS

SUSTAINABLE MATERIALS WITH UNCOMPROMISING PERFORMANCE

It's all in the Chemistry

www.sicomín.com

With the world continuing to need products that are less harmful to the environment, Sicomin believes strongly in the development of sustainable composite materials and continues to invest considerable resource and expertise into developing new, bio-based systems derived from renewable resources.

Sicomin's GreenPoxy® range, developed and manufactured in France, offers the largest range of next generation bio-based epoxy resin systems on the market today, some produced with up to 51% of bio-carbon content deriving from plant and vegetable origin (ASTM D6866).

Matching the performance of non-bio systems, GreenPoxy® has created a wide following and is now used in a variety of markets such as marine structures, water and winter board sports, construction, automotive and electric vehicles. With its recently expanded manufacturing capability, Sicomin can provide commercial scale capacity for the largest of industrial applications with no performance compromised.

GREENPOXY® 28

A bio-based epoxy resin aimed specifically at HP-RTM processing techniques.

- Up to 28% bio-based carbon content*.
- Fast cycle, low toxicity, third generation bio-based formulation.
- Can be used for both high performance structural parts and aesthetic carbon fibre components.
- Optimised for fast production cycle times and superior mechanical performance.
- Available in industrial quantities typically required by Automotive OEM's.

SGI 128
DATASHEET

A bio friendly intumescent gelcoat.

- Up to 38% bio-based carbon content.
- Exceptional fire performance.
- Halogen free with low smoke toxicity.
- Hardwearing weatherproofed finish for exterior applications.
- Available in industrial volumes.
- Tested to EN 13501 (EUROCLASS B-S1-d0) and ASTM E84 (Class A).

INFUGREEN 810

A bio solution for Infusion

- Up to 38% bio-based carbon content.
- Very low viscosity clear system for infusion of small to very large parts, including very thick laminates.
- Room temperature infusion system.
- Choice of hardeners to adjust cure times.

SICOMIN'S GREENPOXY® BIO-BASED RESINS - SUSTAINABLE MATERIALS WITH UNCOMPROMISING PERFORMANCE FOR THE GREENBOATS® FLAX 27

GREENBOATS® has been producing innovative natural fibre composite sailboats at their Bournemouth factory for more than a decade, expertly crafting a range of marine and industrial products with a mission to use 100% renewable and sustainable raw materials in sandwich composite structures.

Sicomin has partnered with GREENBOATS® since the very beginning, with THE OCEAN COMPOSITES - Sicomin's German distributor - supplying materials and technical support to help fabrication and achieve production processes that have been optimised for natural fibre composites.

The FLAX 27, an 8.2m classically styled dinghy designed by renowned naval architect Ludger Voth & Co is the most complex, no compromise, natural fibre composite project realised by GREENBOATS® to date. The hull, deck and internal structure of the vessel were infused with Sicomin's new bio-based GreenPoxy INFUGREEN 810 resin and Res Flow reinforcement fabric.

Vacuum infusion with Sicomin's INFUGREEN 810 produced crystal clear, natural fibre composites with outstanding mechanical properties, while the closed mould process also improved working conditions in the factory. Available with a choice of hardeners to adjust the curing time as required, INFUGREEN 810

GREENPOXY® 33

A bio solution for compression moulding.

- Up to 35% bio-based carbon content.
- A high-performance bio epoxy resin.
- Fast curing, clear laminate.
- High mechanical properties.
- Excellent wetting out properties resulting in a low resin consumption.

SONTAG FINS CONFIRM GREENPOXY® 33 AS BEST SOLUTION FOR CUSTOM CARBON FIBRE WINDSURF FINS

Sicomin's latest marine collaboration sees its industry leading GreenPoxy® bio-based epoxy resin used for custom carbon fibre windsurf fins, combining speed, fatigue performance and sustainability for some of the fastest water athletes.

Being Sontag owner and founder of Sontag Fins, he has been involved with windsurfing since the 1970s and decided to launch the company's custom carbon fibre windsurf fins in 2012. Sontag Fins uses a range of sustainable materials, new research methods, CNC machined parts and resin infusion, all in a rigorous and repeatable process for innovation, design, calculation and testing. Sontag has chosen for ultimate performance and sustainability.

With this in mind, being intent to work with the best composite resin available, Sontag contacted Sicomin to see if they could provide a solution. Sicomin's epoxy resin was chosen for its unique properties, which could provide the performance and sustainability that Sontag was looking for. The resin was chosen for its unique properties, which could provide the performance and sustainability that Sontag was looking for. The resin was chosen for its unique properties, which could provide the performance and sustainability that Sontag was looking for.

In 2020, Sontag and Sicomin contacted the top 10 of various sustainable resin manufacturers. It was the perfect time for Sontag Fins, with their unique high performance carbon fibre fins to go on to the market with Sicomin's GreenPoxy® 33 resin.

This bio resin was produced with the use of natural performing well in a wide range of conditions. The resin was chosen for its unique properties, which could provide the performance and sustainability that Sontag was looking for. The resin was chosen for its unique properties, which could provide the performance and sustainability that Sontag was looking for.

SURF CLEAR EVO

VIEW SURF CLEAR EVO DATASHEET

A bio solution for hand laminating and coating

- Up to 37% bio-based carbon content.
- Provides the highest UV resistance of all the Sicomin clear resins.
- Specifically developed for the construction of surf and windsurf boards.
- High gloss appearance for transparent laminates, clear carbon parts, wooden components, and decorative goods.
- Self-levelling, sandable and scratch resistant.

CASE STUDY

SICOMIN'S GREEN EPOXY USED TO MANUFACTURE ARCHER CORK COMPOSITE SKATEBOARD, WINNER OF THE JEC ASIA 2014 INNOVATION AWARD

Sicomin has collaborated with Archer Cork Skateboards to provide a dynamic direction in environmentally responsible composite technologies.

Archer Cork Skateboards is an Australian company committed to producing products that have been awarded in the most sustainable and sustainable way possible.

Their boards utilize a combination of cork bark veneer for the main deck, Kevlar for the nose and tail, and Sicomin's Green Epoxy 56 resin to bond all the elements together.

Over 50% of Green Epoxy 56's molecular structure is derived from plant and vegetable sources, making the product an advanced, environmentally enhanced, clear and non-toxic system that delivers a tough and hard wearing laminate surface.

Sicomin's Green Epoxy 56 resin is used to bond the cork bark veneer to the Kevlar and the cork core, ensuring the board's strength and durability.

The combination of the product's flexibility and the natural cork core, makes the cork board ideal for a sustainable reduction in vibration and a higher impact resistance.

The flexibility of the cork continues perfectly with the reinforcement, which also has other characteristics. The resin has an use for strength.

KETOS ALL CARBON EPOXY KITE FOILS AND BOARDS WITH SICOMIN EPOXY SOLUTIONS

Sicomin has been supplying the marine industry's innovators and partners for more than 50 years, manufacturing high performance epoxy resin, gelcoats and coating systems for stronger, lighter and faster marine craft around the world. As the development of foiling - where a board or foil flies above the water supported by hydroplaning - continues, Sicomin work alongside some of the sport's most innovative athletes, providing the composite strength within these spectacular flying machines.

Ketos - based in Ales Les Bains near the beautiful Lake Bourget - is the foil brand developed by the team behind K2 Composites, who have been manufacturing advanced composite components for leading sporting brands such as Salomon, Boardcraft, Maui and Sup'Air for more than 30 years. Sicomin has supplied composite materials to K2 since 1980, making them the number one choice when the company started to develop foils for kitesurfing in 2000.

The Ketos range of kitesurf boards and foil is an entirely in-house creation, with conception, design, engineering, prototyping, manufacturing, marketing and distribution all managed by the Ketos team. Focused on performance but also on making the sport accessible to more riders, Ketos foil packages can be tailored to match the user's ability and preference for speed, ease or handling.

Ketos foil sets are made up of 4 carbon fiber components - the vertical mast separates the board and the foilage which has different profile base and tip angle choices. As part of the Ketos concept is that parts should be interchangeable, making easy to change foil for different conditions, upgrade components as their skill levels increase or replace a damaged part while it is

PB 360 GS

New bio-foaming epoxy.

- Up to 37% bio-based carbon content.
- Allows 'in situ' production of a shaped low-density epoxy foam core.
- Two-part system.
- Offers good adhesion to a variety of materials and low water absorption.
- Particularly suited to foam cored components with lightweight glass, carbon or natural fibre laminates.

“Our goal is to really get people excited about Natural Fibre Composites. Sicomin’s GreenPoxy® products help us create sustainable composites with no compromise in performance or appearance.”
GREENBOATS®

SICOMIN EPOXY RESINS AND ADHESIVES – POWERING QUIET AND CLEAN FLIGHT AT CANDELA BOATS

Sicomin, the leading formulator and supplier of epoxy resin systems and high-performance composite solutions is proud to announce the qualification of its epoxy resin system and adhesive products for the series production of Candela's groundbreaking new all electric, flying boat.

Candela Aviation, the Candela 7 is a single 7.7m open motorboat that combines carbon fibre construction and hydrofoils to create a near silent 100% electric craft with a range of 500 nautical miles at 25 knots on a single charge. Absolute focus on weight reduction is the key to the game-changing performance. With a wet weight of only 1300kg the Candela's is 40-50% lighter than a traditional glass fibre boat that powered boat.

Composite engineering work by Candela's design and engineering team, experts with backgrounds in aeronautics, composites, sailing yachts and automotive engineering, delivered a fully flying carbon fibre hull and deck structure capable of supporting the 250kg battery pack whilst only weighing 240kg itself.

Sicomin joined the project at an early stage, working with Candela to supply high-performance epoxy laminating resin for the manufacture of the hull and hydrofoils. With the ramp up of series production, the company has also been able to support Candela's targets to industrialize the production process, providing material and process support that are then validated with evidence on the water testing.
